Disclaimer

This Presentation (the “Presentation”) has been prepared and issued by Kenmare Resources plc (the “Company” or “Kenmare”). While this Presentation has been prepared in good faith, the Company and its respective officers, employees, agents and representatives expressly disclaim any and all liability for the contents of, or omissions from, this Presentation, and for any other written or oral communication transmitted or made available to the recipient or any of its officers, employees, agents or representatives.

No representations or warranties are or will be expressed or are to be implied on the part of the Company, or any of its respective officers, employees, agents or representatives in or from this Presentation or any other written or oral communication from the Company, or any of its respective officers, employees, agents or representatives concerning the Company or any other factors relevant to any transaction involving the Company or as to the accuracy, completeness or fairness of this Presentation, the information or opinions on which it is based, or any other written or oral information made available in connection with the Company.

This Presentation does not constitute or form part of, and should not be construed as, an offer, invitation or inducement to purchase or subscribe for any securities of the Company nor shall it or any part of it form the basis of, or be relied upon in connection with, any contract or investment decision relating to such securities, nor does it constitute a recommendation regarding the securities of the Company.

This Presentation is as of the date hereof. This Presentation includes certain statements, estimates and projections provided by the Company with respect to the anticipated future performance of the Company or the industry in which it operates. Such statements, estimates and projections reflect various assumptions and subjective judgments by the Company’s management concerning anticipated results, certain of which assumptions and judgments may be significant in the context of the statements, estimates and projections made. These assumptions and judgments may or may not prove to be correct and there can be no assurance that any projected results are attainable or will be realised. In particular, certain statements in this Presentation relating

to future financials, results, plans and expectations regarding the Company’s business, growth and profitability, as well as the general economic conditions to which the Company is exposed, are forward looking by nature and may be affected by a variety of factors. The Company is under no obligation to update or keep current the information contained in this Presentation, to correct any inaccuracies which may become apparent, or to publicly announce the result of any revision to the statements made herein and any opinions expressed in the Presentation or in any related materials are subject to change without notice.

Introduction to Kenmare

Progressive land
rehabilitation programme

Established producer, consistent cash generation

Overview: Kenmare Resources plc

Moma Titanium Minerals Mine in Mozambique

- Track record of ~20 years of production
- >100 years of Mineral Resources at current production rate

Trusted corporate citizen

- Meaningful contribution to Mozambique economy
- Constituent of FTSE4Good index

Market-leading position

- Titanium minerals are used in the manufacture of paints, paper, plastic and titanium metal
- Kenmare represents 6% of global titanium minerals supply
- Titanium is recognised as a critical mineral

Significant capital investment

- Bulk mining, processing and export facilities
- Net book value of >\$875m

Market leadership built on a robust strategy

Strategic priorities and recent performance

OPERATE RESPONSIBLY

- >\$25m invested into community initiatives since 2004
- Industry-leading safety performance

98%
MOZAMBICAN
WORKFORCE

DELIVER LONG LIFE, LOW-COST PRODUCTION

- >100 years of Mineral Resources providing stable, long-term supply
- Strong customer relationships that have endured several industry cycles

9bt
MOMA'S MINERAL
RESOURCES

ALLOCATE CAPITAL EFFICIENTLY

- Dividends paused to ensure long-term financial stability
- Funding capital projects from existing cash, operating cash flow and debt

>\$300m
SHAREHOLDER
DISTRIBUTIONS SINCE
2019

One of the world's largest titanium deposits

Overview of the Moma Mine – a well-established operation in production since 2007

Low cost, bulk mining operation

- Three Wet Concentrator Plants (WCPs) in production, plus a Selective Mining Operation (SMO)
 - WCP A – 3,500 tph, 2x dredges
 - WCP B – 2,400 tph, 1x dredge, 1x dry mine
 - WCP C – 500 tph, 1x dredge
- On-site Mineral Separation Plant (MSP) to convert Heavy Mineral Concentrate (HMC) into finished products
- Dedicated on-site port facilities provide easy access to market

Low environmental impact

- Primarily hydro-generated electricity (>90% of electrical requirements)
- Progressive rehabilitation of mined areas
- No toxic chemicals used in mining or processing operations
- >90% water re-use rate
- >90% recycling rate of waste generated

Sustainability goals advanced in 2025

Four strategic sustainability focus areas

Safe and engaged workforce

- Largest employer in Nampula Province, with >1,680 direct employees at Moma

Thriving communities

- Kenmare Moma Development Association (KMAD) has supported construction of water supply systems, health centres and schools

Healthy natural environment

- One of the lowest carbon intensity mineral sands miners for Scope 1 emissions

Trusted business

- Named as the most transparent extractive company in Mozambique for fifth consecutive year

A high-quality shareholder register

Dedicated port facilities

Kenmare's product markets

Mineral sands: essential to modern life

Demand for Kenmare's products is driven by global GDP growth and urbanisation in emerging markets

Titanium feedstocks (ilmenite and rutile)

- TiO₂ pigment imparts whiteness and opacity in the manufacture of paints, plastics and paper
- Non-recyclable and difficult to substitute

Pigment is a “quality of life” product, consumption grows as income levels increase

- Significantly higher TiO₂ pigment consumption per capita in developed western economies
- Large population developing economies are set for strongest pigment and zircon demand growth

Zircon

- An important raw material for the ceramics industry for wall tiles, floor tiles and sanitary ware
- Emerging market zircon and pigment demand growing rapidly

Rare Earth Elements

- Contained in the mineral monazite, used in a wide range of applications and essential to support the energy transition

World GDP vs TiO₂ pigment consumption¹

TiO₂ regional pigment consumption (kg/capita)²

Demand for mineral sands is driven by global GDP growth and urbanisation in emerging markets

1: Source: Company (1966 GDP base year)

2: Source: Company (2021 data)

Ilmenite remains weak but zircon recovered in Q2

H1 2026 markets products review and H2 2026 outlook

Kenmare's average price received (\$/t)

Stable demand for all products in H1 2026 but ilmenite pricing soft

- Ilmenite market was oversupplied in H1 2026 resulting in a lower average ilmenite price received
 - This was particularly evident in China due to growth in the supply of concentrates and higher domestic ilmenite production
- Higher freight charges due to US/Iran conflict also impacted average ilmenite price received

Higher prices achieved for all zircon products in H1

- Zircon prices benefitted from reduced zircon supply from major producers

Robust demand for all products continues in H2

- Positive demand trends have continued into H2 but global oversupply is expected to continue to weigh on ilmenite pricing

H1 2026 review

Wet Concentrator Plant A

Strong demand for new ZrTi product

H1 2026 operations review

HMC

-39%

H1 2025: 449,900t

Rutile

2,700t

-44%

H1 2025: 4,800t

Shipments

555,600t

14%

H1 2025: 488,900t

Mining

- Reduced Heavy Mineral Concentrate (HMC) production due to:
 - Lower ore grades and reduced excavated ore volumes due to WCP A commissioning and paused WCP B dry mining
- Production is forecast to strengthen in H2, supported by WCP A improvements and strong performance from WCP B, leading to lower unit costs

Finished products

- Production of finished products was impacted by lower HMC production
- Concentrates production was up 599% YoY principally due to ZrTi – annual concentrates guidance materially exceeded in H1

Shipments

- Shipments were up 14% YoY due to ~128kt stock drawdown and consistent transshipment performance
 - On track to achieve shipments guidance of >1.1Mt

Improved production in early H2, with 2026 ilmenite production guidance of ~800kt

1. Concentrates include secondary zircon, mineral sands concentrate and a new concentrates product called ZrTi

Financial performance reflects tough conditions

H1 2026 financial overview

1. 2025 figures are adjusted to exclude impairment charge of \$301.3m

Implementation Agreement negotiations ongoing

Overview of Implementation Agreement (IA) and renewal process

Background to IA

- The IA governs the terms under which Kenmare conducts its processing and export activities, including royalties
- It does not impact day-to-day mining operations in any way
- The IA was signed in 2002 with a term to December 2024 and included a right of renewal on the same terms
- Since December 2024, Kenmare has continued to operate under the previous IA's terms, with the Government's support

Renewal process

- Kenmare has made several offers with improved terms, recognising the Government's desire for increased revenue from Moma
- MD Tom Hickey met President Chapo twice in 2025 and highlighted the importance of a timely resolution to the negotiations for both Kenmare and the nation
- President Chapo emphasised Moma's significance to Mozambique and stressed the Government's intention to renew the IA

Recent progress

- During 2026, there have been regular meetings with Government ministers and discussions with their technical teams
- These discussions indicate significant progress on the outstanding issues
- Kenmare remains committed to pursuing a near-term negotiated IA renewal

Community plant nursery

KENMARE
RESOURCES PLC

Summary

Active focus on minimising costs

Kenmare's 2026 guidance¹

		2026 Guidance	H1 2026 Actual	2025 Actual
Shipments	tonnes	In excess of 1,100,000	555,600 ²	947,900
Production				
Ilmenite	tonnes	Approximately 800,000	273,100	842,300
Primary zircon	tonnes	In excess of 41,000	18,600	50,000
Rutile	tonnes	In excess of 7,500	2,700	8,600
Concentrates ²	tonnes	In excess of 81,000	135,700	103,100

Costs		2026 Guidance	H1 2026 Actual	2025 Actual
Total cash operating costs	\$m	215-225 ³	109.6	242.7
Cost per tonne of finished product	\$/tonne	\$240-\$250 ³	255	242

- Kenmare is on track to achieve 2026 shipments – H1 shipments (including ZrTi) are in line with the run rate of annual guidance
- Ilmenite production in 2026 is expected to be approximately 800,000 tonnes, rather than in excess of 800,000 tonnes
- Annual concentrates production guidance of >81,000t was materially exceeded in H1, meeting strong customer demand
- Kenmare is on track to achieve total cash operating costs, with continuing focus on reducing operating costs in H2
- Materially lower capital expenditure expected in 2026 than in 2025
 - Development capital is expected to be \$30m, with ~\$23m incurred on the WCP A upgrade in H1
 - Sustaining capital is expected to be ~\$30m in 2026, including SMO 2, with ~\$7m incurred in H1

1. Announced on 21 January 2026. Ilmenite production guidance was amended to “approximately 800,000 tonnes” from “in excess of 800,000 tonnes” on 16 July 2026 2. Including ZrTi

3. Concentrates includes secondary zircon, mineral sands concentrate and a new concentrates by-product, ZrTi 3. Based on minimum 2026 production guidance

Transforming resources into opportunity for all

Delivering Kenmare's purpose

Resilient long-term production profile

- One of the world's largest titanium minerals deposits
- >100 years of Mineral Resources at current production rate
- Transition of WCP A to Nataka is key to securing production from Moma for decades to come

Cashflow generation through the cycle

- Solid record of operating cashflow generation
- Operating cost improvements being implemented in 2026, supporting liquidity and financial flexibility

Strong market position

- Preferred supplier due to Moma's long mine life and favourable characteristics of product suite
- Geographically diversified customer base, with 25 customers operating in 15 countries

Creating value for all stakeholders

- >\$300m in shareholder distributions since 2019
- >\$25m invested into community initiatives through K MAD since 2004, plus >\$215m paid to Mozambican Government through taxes and royalties since 2019
- Renewal of Moma's Implementation Agreement continues to be a priority – significant progress on relevant issues

Focused on creating long-term value for all stakeholders
